

NWT NUNAVUT Mining

A News/North Report on Mining
November 2011

Nunavut stock rises while NWT smothers under red tape

- Gahcho Kue production estimates 4.5 million carats a year
- Agnico-Eagle ramps up training
- Peregrine and BHP find more kimberlites
- Sabina adds to Back River gold resource
- Zinc giant Xstrata buys into Hackett River

CREATING OPPORTUNITY

The Mary River Project is the most significant development ever planned above the Arctic Circle. Requiring an investment of approximately \$6 billion, the scope and calibre of this project requires skills and experience that can come from working on similar projects, especially northern mining projects on aboriginal lands.

Working in collaboration with the people of North Baffin, our management team has the ability and commitment needed to develop a safe and environmentally responsible mine at Mary River, one that is beneficial to all.
